DETAILED ACTION

Allowable Subject Matter

1. Claims 1-2,5-6,8-9 are allowed.
2. The following is an examiner's statement of reasons for allowance: Prior art shows a actuator having magnetostrictive rods fixed to the drive plate through which angular movement of the rod resulting from torque produced by it's contraction which is transferred to the stroke multiplier while it's axial movement is block.
3. However prior art fails to show an actuator within which maximized magnetostriction deformation is induced by a magnetic field assembly crystallographically applying magnetic fields in a predetermining direction wherein, the output member: means for transferring force produce by the applied magnetic field in a direction perpendicular to the predetermined direction; and means for converting the transferred force into a substantially enlarge linear output motion of the output member. Prior art also fails to show a plate member to which the output motion is imparted; and a plurality of magnetostrictive material slabs within which the magnetostrictive deformation is induced and a prestress means for holding the magnetic circuit means assembled under bias between the ground and the output members. Prior art also fails to show an output member to which linear output motion is imparted; a plurality of magnetostrictive slabs to which magnetostrictive forces are applied by magnetic field; and means for converting magnetostrictive forces sequentially inducing deformation of the slab into linear output motion imparted to the output member.
